Avalanche Hazard Forecast

Issued 10/03/2024

FOR PERIOD 18:00HRS Sun 10/03/2024 TO 18:00HRS Mon 11/03/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 11/03/2024

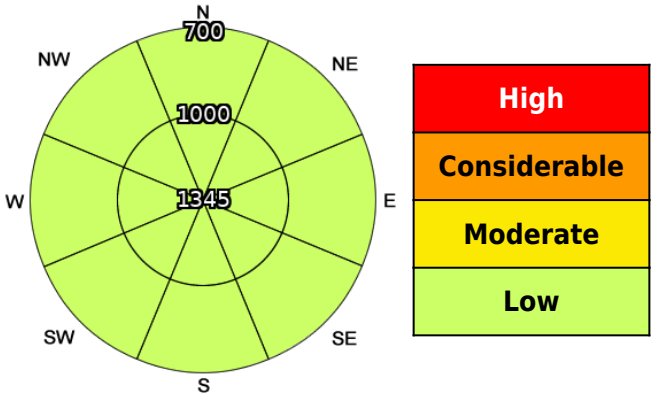
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will be generally well bonded, icy and stable. Some isolated areas of windslab will be present in wind sheltered locations on mainly West through North to North-East aspects above 1000 metres. Gully tops and scarp slopes will be most affected. These accumulations are not expected to be significant and will be mostly avoidable. Firm cornices will overhang many of the same aspects. The avalanche hazard will be Low.



Forecast Weather Influences

Fresh to strong East-South-East winds will decrease to moderate and veer to become South-East during the afternoon. Trace amounts of snow are expected later in the day. Summit temperatures will be around -3 degrees C.

Comments

Slightly less windy day in prospect with many slopes remaining firm and icy.
