Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sun 10/03/2024 TO 18:00HRS Mon 11/03/2024

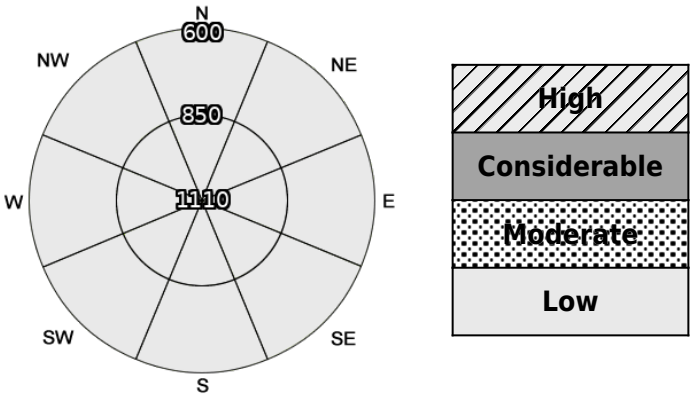
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 11/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change is expected to the snowpack which will be firm and stable throughout. Any new snow will be largely insignificant. Greatest snow cover will be in the mountain areas inland from the coastal ranges, with most accumulations on Northerly to Easterly aspects above 700 metres, particularly in gullies, coire back walls and below coire rims. Coastal ranges mostly bare with only snow remnants on same aspects. The avalanche hazard will be Low.



Forecast Weather Influences

Winds remaining fresh to strong generally East-South-Easterly, easing in strength towards the end of the day. A mostly dry period is expected, but with some precipitation later in the afternoon falling as sleet or snow above 800 metres.

Comments

Most snow in inland ranges and quite extensive in N-NE facing slopes - very hard and icy with serious consequences for any slips or falls.
