Avalanche Hazard Forecast

Issued 15/01/2024

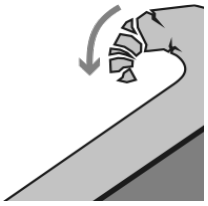
FOR PERIOD 18:00HRS Mon 15/01/2024 TO 18:00HRS Tue 16/01/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 16/01/2024

Avalanche Problems

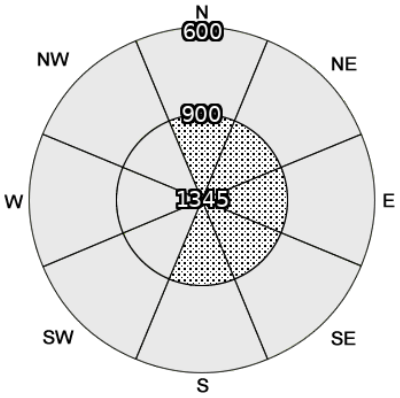
Wind Slab

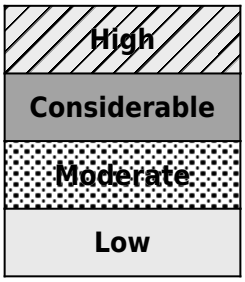


Cornices

Forecast Snow Stability & Avalanche Hazard

Localised areas of unstable windslab will persist on South-East and South aspects and develop during the day on North through East to South aspects above 900 metres. Features such as gully tops and corrie rims will be most affected. The older snowpack will remain well bonded, firm and stable. Fresh cornices will be fragile. The avalanche hazard will be Moderate.





Forecast Weather Influences

After a dry evening showers will fall as snow to low elevations. Moderate winds, direction variable but from somewhere in the Western half of the compass rose. The freezing level will rise to around 250 metres during the day.

Comments

Low confidence in forecast snow amounts. Make adjustments to hazard level as necessary based on your own observations.
