Avalanche Hazard Forecast

Issued 16/01/2024

FOR PERIOD 18:00HRS Tue 16/01/2024 TO 18:00HRS Wed 17/01/2024

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 17/01/2024

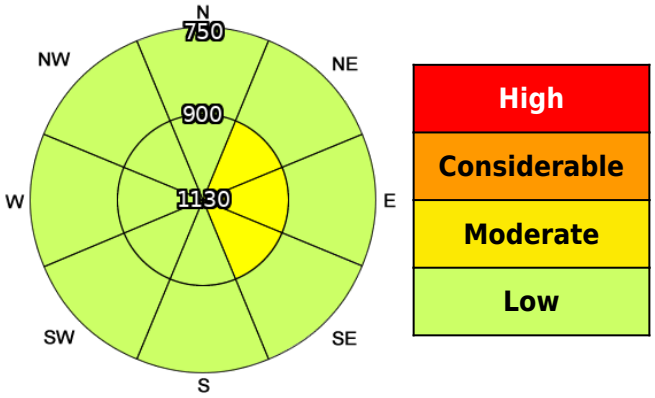
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Redistributed accumulations of unstable windslab will form in sheltered locations mainly on North-East through East to South aspects above 800 metres. Greatest accumulations will be around crags, buttresses, coire rims and gullies. Unstable windslab will also be present on North and South-West aspects. Cornices will be fragile. Areas exposed to the wind will remain frozen. The avalanche hazard will be Considerable.



Forecast Weather Influences

Any remaining snow showers clear away this evening becoming dry overnight and into the morning. Moderate to fresh Northerly winds will become variable from Western directions with stronger gusts possible. Further snow showers down to all levels are expected from late morning and through the afternoon. The freezing level will remain around 100 metres throughout the period.

Comments

Remaining cold into Thursday.
