Torridon

Avalanche Hazard Forecast

Issued 05/02/2022

FOR PERIOD 18:00HRS Sat 05/02/2022 TO 18:00HRS Sun 06/02/2022

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 06/02/2022

Avalanche Problems

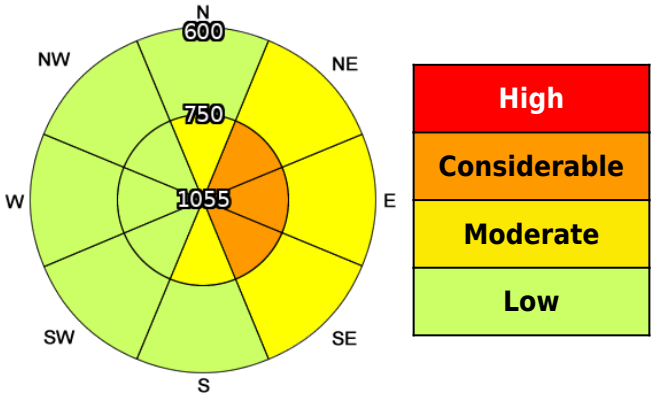

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Windslab will continue to develop and gain depth in wind sheltered locations, such as gullies, corrie rims and ridge flanks. Greatest accumulations will be on North-East to South-East aspects above 750 metres with more localised accumulations at lower elevations. North and South aspects above 750 metres will also be affected due to cross loading. Cornices will develop above all of these aspects. Windward slopes will generally be scoured and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Constant showers throughout the forecast period will fall as snow at most levels. The freezing level will be around 300 metres. Very strong Westerly winds.

Comments

More snow forecast for the Fannichs than the Torridon hills. Another mild day on Monday.
