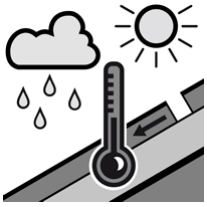
Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 22/01/2024 TO 18:00HRS Tue 23/01/2024

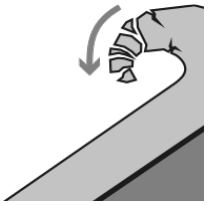
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 23/01/2024

Avalanche Problems



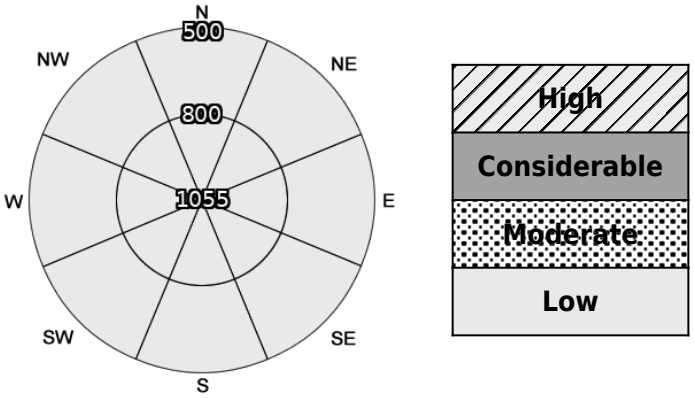
Wet Snow



Cornices

Forecast Snow Stability & Avalanche Hazard

The existing snowpack will remain stable in all locations. Minor wet snow surface instabilities possible on steep slopes where shallow new snow deposits are present, mainly North to East aspects above 800 metres. Any remaining cornices will be prone to collapse. The avalanche hazard will be Low.



Forecast Weather Influences

Scattered showers will initially be of snow above 500 metres, becoming heavier and turning to rain at all levels late morning as the freezing level rises rapidly above the summits. Strong Westerly winds overnight will become mainly Southerly and increase to Gale force for most of the day.

Comments

Stormy conditions with temperature fluctuations continuing.
