Avalanche Hazard Forecast

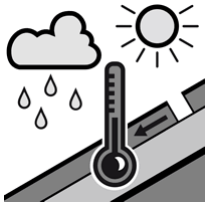
FOR PERIOD 18:00HRS Mon 22/01/2024 TO 18:00HRS Tue 23/01/2024

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

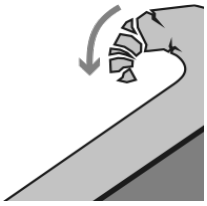
Avalanche Hazard Forecast for Tuesday 23/01/2024

Avalanche Problems

Wind Slab



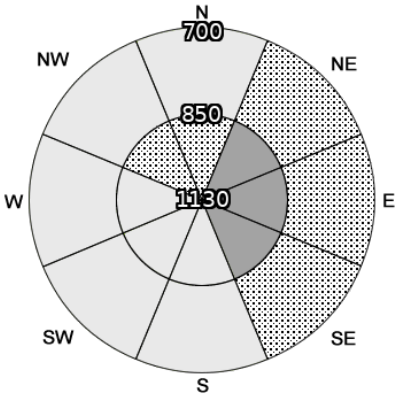
Wet Snow

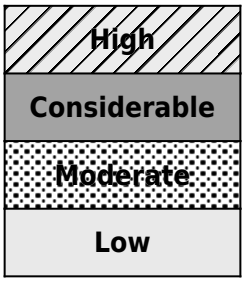


Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to develop overnight mainly on North-East to South-East aspects above 850 metres with some redistribution to North-West and West aspects in the morning. There will be a period of poor stability as the temperature rises during the day when avalanches are likely and cornices will be prone to collapse. The older snowpack will remain generally stable. The avalanche hazard will be Considerable.





Forecast Weather Influences

Westerly gales overnight ease and back to the South-South-East around dawn, increasing to Gale force again through the morning. Showers overnight will fall as snow above around 700 metres followed by heavy rain at all elevations during the day. Freezing level around 800 metres overnight rising well above the summits during the day.

Comments

Unsettled conditions forecast to continue.
