Torridon

Avalanche Hazard Forecast

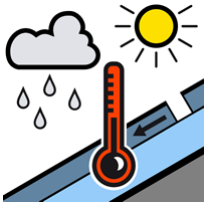
Issued 23/01/2024

FOR PERIOD 18:00HRS Tue 23/01/2024 TO 18:00HRS Wed 24/01/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 24/01/2024

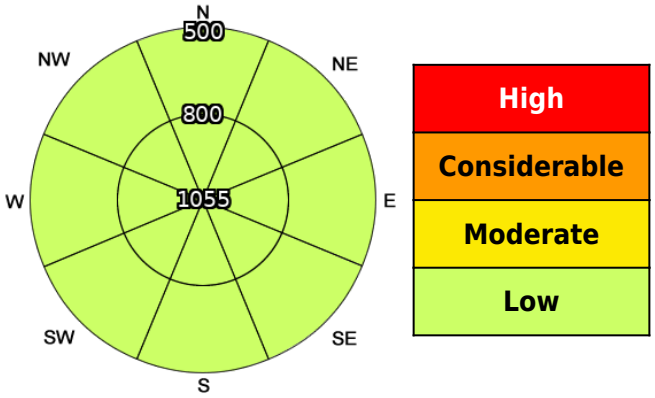
Avalanche Problems



Wet Snow

Forecast Snow Stability & Avalanche Hazard

The wet snowpack will remain stable throughout and will firm up around the higher summits as the freezing level lowers. During the day, insignificant amounts of new snow will likely accumulate in wind sheltered locations, largely above 850 metres and mainly on North to East aspects. The avalanche hazard will be Low.



Forecast Weather Influences

Storm force South-Westerlies will veer West overnight and gradually ease through the day, becoming fresh to strong. Overnight rain at all levels will ease by daybreak, turning to light and scattered showers through the day, wintry above 850 metres as the freezing level lowers to around 900 metres by late morning.

Comments

After a stormy night, it will brighten up during the day as a ridge of high pressure crosses the area, with light showers possible and becoming a bit colder. Looking like it will remain unsettled and windy into the weekend.
