FOR PERIOD 18:00HRS Tue 02/04/2024 TO 18:00HRS Wed 03/04/2024

THE AVALANCHE HAZARD WILL BE MODERATE

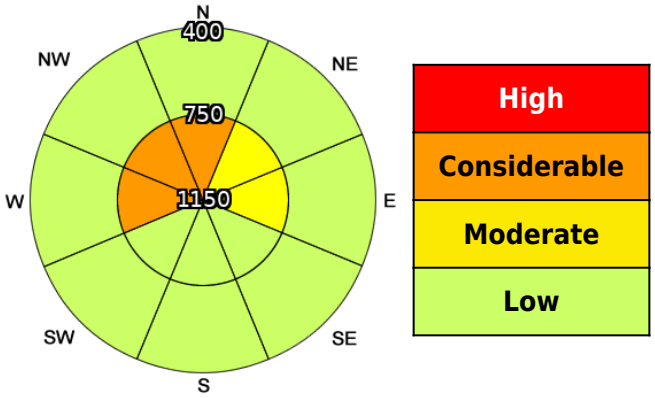
Avalanche Hazard Forecast for Wednesday 03/04/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised accumulations of moderately bonded windslab will form in wind sheltered locations on South through West to North-West aspects above 900 metres. The old snow will refreeze, becoming firm and icy in places. Greatest amounts of snow will be encountered on the high plateau areas and in North to East facing corries above 900 metres. The avalanche hazard will be Moderate.



Forecast Weather Influences

Light snowfall throughout the period on strong East-North-Easterly winds. The freezing level will lower overnight to 750 metres.

Comments

Old, wet snow will refreeze becoming firm and icy.
