FOR PERIOD 18:00HRS Mon 08/04/2024 TO 18:00HRS Tue 09/04/2024

THE AVALANCHE HAZARD WILL BE LOW

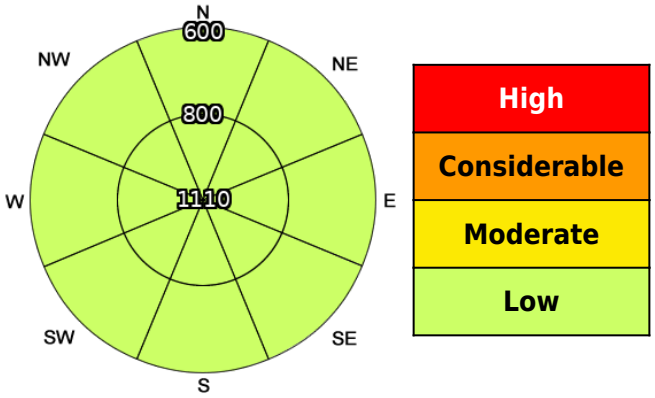
Avalanche Hazard Forecast for Tuesday 09/04/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The limited patchy snow cover will remain well bonded and stable in all locations. New accumulations of windslab will develop on East to South aspects above 800 metres but these will be generally isolated and shallow. The avalanche hazard will be Low.



Forecast Weather Influences

Dry overnight before the onset of light precipitation from dawn onwards. This will fall as snow above between 900 and 800 metres. Fresh South-West winds will veer to become North-Westerly in direction and increase strong to gale force during the day. The summit freezing level will steadily fall through the day to 800 metres by the end of the forecast period.

Comments

Blustery conditions continuing.
