Avalanche Hazard Forecast

Issued 25/01/2024

FOR PERIOD 18:00HRS Thu 25/01/2024 TO 18:00HRS Fri 26/01/2024

THE AVALANCHE HAZARD WILL BE MODERATE

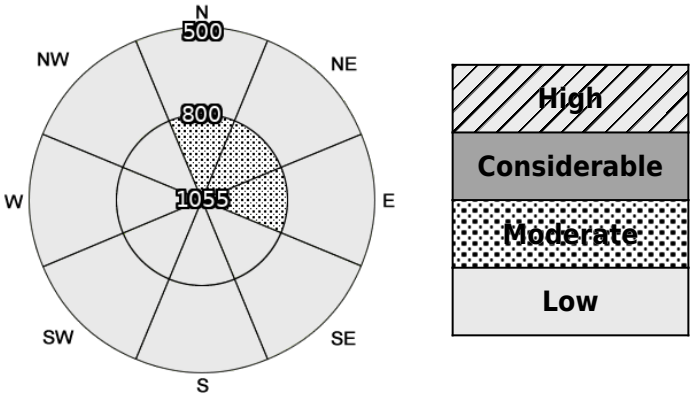
Avalanche Hazard Forecast for Friday 26/01/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The moist snowpack will refreeze during the night. Should accumulations be significant, unstable windslab will accumulate in any wind sheltered locations, especially gully tops and coire rims. Primarily this will be on North to East aspects above 800 metres. Elsewhere stability will be good. The avalanche hazard will be Moderate.



Forecast Weather Influences

Storm force South-Westerly winds through out the forecast period. Showers falling as snow above 600 metres, primarily during the early hours but continuing during the day to lower levels. Anticipated accumulations amounts uncertain. Fluctuating freezing level, above summits initially, dropping to 400 metres by dawn before rising to the summits by dusk.

Comments

A wet day! Amounts of overnight snow are uncertain, Inland areas likely to see greater accumulations than coastal area.
