Avalanche Hazard Forecast

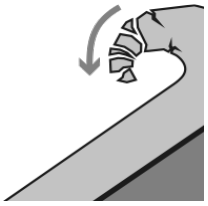
FOR PERIOD 18:00HRS Mon 08/04/2024 TO 18:00HRS Tue 09/04/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 09/04/2024

Avalanche Problems

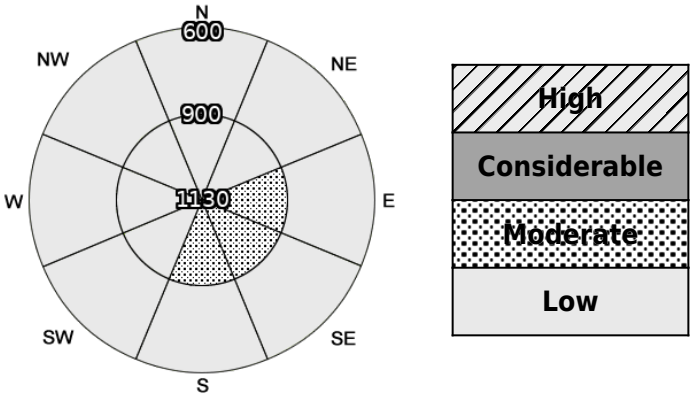
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

Moderately bonded windslab will begin to develop on steep East to South aspects. Initially only affecting the top of steep coire backwalls and gully exits, later becoming more widespread and extending down to 900 metres as wind speeds increase. New weak cornice development anticipated over steepest lee areas. The remainder of the old exposed snowpack will refreeze and remain well stabilised. The avalanche hazard will be Moderate.



Forecast Weather Influences

Becoming colder. Persistent snow showers throughout the period, heaviest before dawn. Light Northerly winds becoming strong North-Westerly later.

Comments

Avalanche hazard steadily developing over the forecast period. Weak new cornices. Winter returns.
