Lochaber

Avalanche Hazard Forecast

Issued 13/04/2024

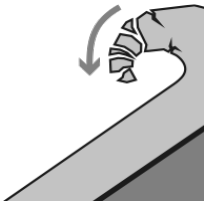
FOR PERIOD 18:00HRS Sat 13/04/2024 TO 18:00HRS Sun 14/04/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 14/04/2024

Avalanche Problems

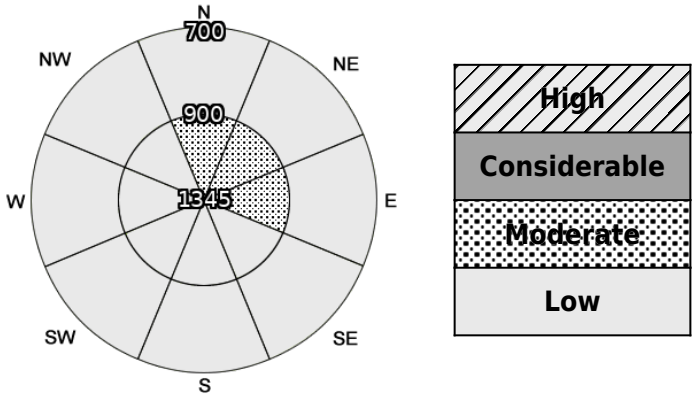
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will develop through the period mainly on North to East aspects above 900 metres. Fragile cornices will develop above these aspects. The older snowpack will remain well bonded and stable, becoming firm particularly where exposed. The avalanche hazard will be Moderate.



Forecast Weather Influences

Gale force West to South-Westerly winds continuing. Snow showers, heaviest in the evening and during the day. The freezing level will be around 800 metres overnight rising to 950 metres during the afternoon.

Comments

This is the last planned forecast for the season. It looks like windslab instabilities forecast for Sunday will persist for the next few days with South-East and South aspects also affected as the wind veers to the North-West.
