

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 10/02/2022

Avalanche Problems

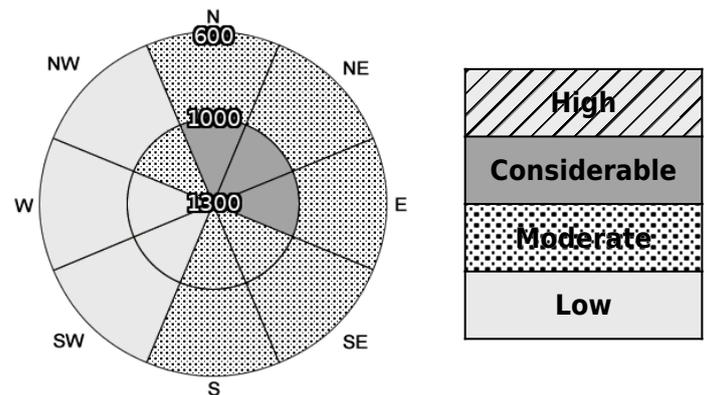

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will become more widespread on North to East then later South-Easterly aspects above 1000 metres. Steep wind sheltered terrain will be most affected especially the tops of gullies, coire rims and crag aprons. Unstable windslab will be more localised on these aspects below 1000 metres. Fragile cornices will continue to develop. Cross loading will affect other areas. Elsewhere will be mostly wind scoured and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers will continue throughout the forecast period. Strong to gale force South-Westerly winds will veer to become North-Westerly, easing through the afternoon. The 400 metre freezing level will rise to 600 metres during the morning, later falling back to 400 metres by the end of the day.

Comments

Old snow ice has become very firm with serious run out potential into rocky terrain below.
