Avalanche Hazard Forecast

Issued 02/02/2024

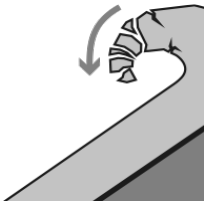
FOR PERIOD 18:00HRS Fri 02/02/2024 TO 18:00HRS Sat 03/02/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 03/02/2024

Avalanche Problems

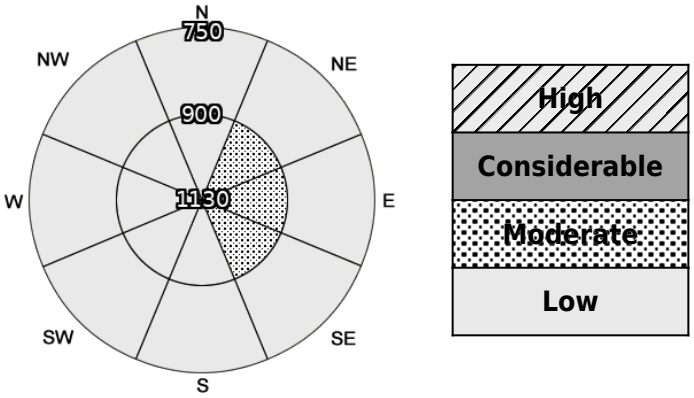
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

The surface of the old snowpack will freeze and become crusty or firm. New weak windslab will form on steep North-East to South-East facing aspects above 900m. Initially localised, new windslab will become a little more widespread later. Minor new cornice development anticipated over steepest lee slopes and gullies. The avalanche hazard will be Moderate.



Forecast Weather Influences

Rain turning to snow showers by midnight and continuing for the rest of the day. Much colder. Strong Westerly airflow.

Comments

Showery nature of snowfall means our area may get slightly more or less than forecasted. Adjust avalanche forecast accordingly when on site.
