Avalanche Hazard Forecast

Issued 03/02/2024

FOR PERIOD 18:00HRS Sat 03/02/2024 TO 18:00HRS Sun 04/02/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 04/02/2024

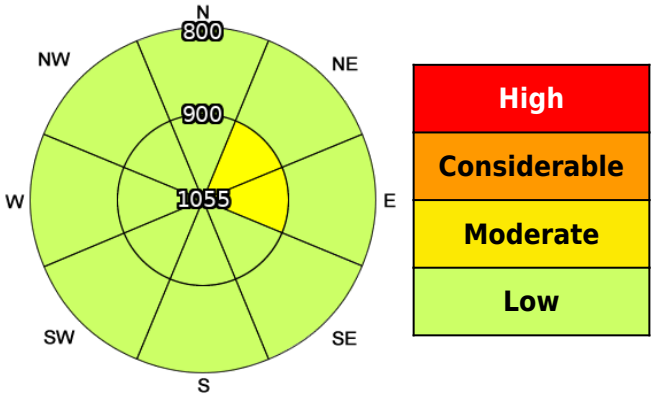
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised areas of fresh unstable windslab will continue to accumulate through the period mainly on North-East to East aspects above 900 metres. Fragile cornices will start to form above these aspects. The older snowpack will be well bonded and stable. The avalanche hazard will be Moderate.



Forecast Weather Influences

Gale force West-South-Westerly winds overnight will ease slightly during the day. Showers, heaviest during the day, will fall as snow above around 800 metres. The freezing level will be around 900 metres.

Comments

Uncertainty in snow amounts - be prepared to make adjustments to the hazard level based on your observations.
