Southern Cairngorms

Avalanche Hazard Forecast

Issued 06/02/2024

FOR PERIOD 18:00HRS Tue 06/02/2024 TO 18:00HRS Wed 07/02/2024

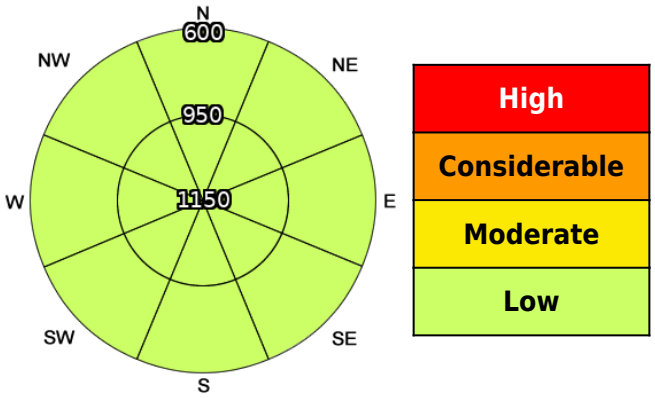
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 07/02/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change is expected. The old patchy snow cover will remain firm, icy and stable in all locations. Largest snow patches will be found above 950 metres on North to East aspects around coire rims, in gully lines and on high plateau areas. Any new snow is not expected to be significant. The avalanche hazard will be Low.



Forecast Weather Influences

The freezing level will fluctuate around 350 metres with only the occasional light snow shower forecast. Overnight very strong North-North-Westerly winds will decrease to become strong and back Westerly, where they will remain throughout the day.

Comments

Remaining cold for the next few days. Any snow showers that reach the Southern Cairngorms are expected to be light. The firm and icy snow patches mean that a slip or fall may have serious consequences.
