

## THE AVALANCHE HAZARD WILL BE CONSIDERABLE

### Avalanche Hazard Forecast for Friday 11/02/2022

#### Avalanche Problems

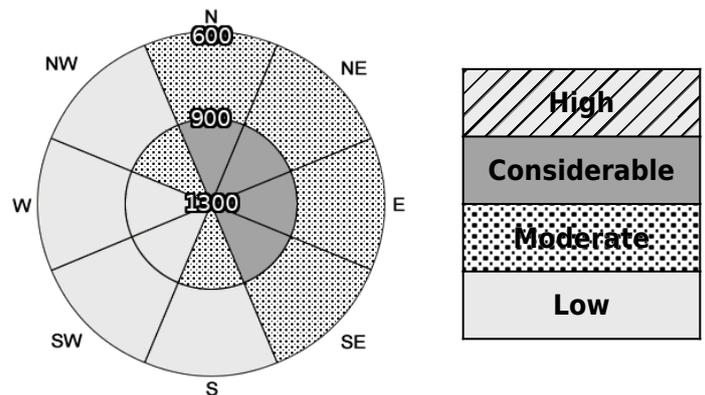

Wind Slab

Persistent Weak Layers

#### Forecast Snow Stability & Avalanche Hazard

Areas of unstable windslab will remain in wind-sheltered areas on North through East to South-East aspects above 900 metres. Although not particularly extensive many of these deposits will be quite deep. Areas of windslab will also be present on similar aspects at lower levels, but will tend to be shallower and more stable. Exposed windward aspects will hold little snow and are mostly scoured. The avalanche hazard will be Considerable.

#### Forecast Weather Influences

It will be generally dry through the period. Moderate winds will be from the South-West. The freezing level will rise to around 600 metres through the day.

#### Comments

Although the hill will look quite scoured, deep unstable windslab will be lurking in the gullies and wind sheltered areas.
