Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 07/02/2024 TO 18:00HRS Thu 08/02/2024

THE AVALANCHE HAZARD WILL BE LOW

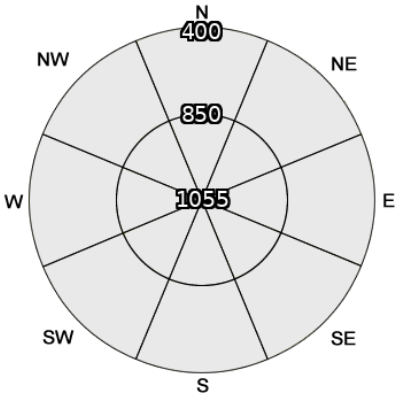
Avalanche Hazard Forecast for Thursday 08/02/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The old snowpack remnants above 800m will be frozen icy and stable. There will be a thin insignificant covering of snow on all aspects, some deeper avoidable accumulations of soft but generally stable snow will be present above 850m on Northerly through East to North-Easterly aspects, then on Westerly aspects as the wind veers and snow is redistributed onto mostly bare ground. Wind sheltered hollows, coire rims and gully tops most affected. The avalanche hazard will be Low



Forecast Weather Influences

It will remain cold freezing at glen level and around 100 metres altitude throughout the day. Winds will be mostly light Westerly overnight veering East-North-Easterly during the afternoon and freshening in strength. It is expected to be a dry day with some overnight snow showers.

Comments

A rare winters day - a thin cover on most aspects with old hard snow remnants hard, icy and serious consequences for any slips and falls.
