Torridon

Avalanche Hazard Forecast

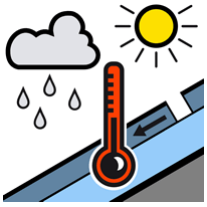
Issued 07/02/2015

FOR PERIOD 18:00HRS Sat 07/02/2015 TO 18:00HRS Sun 08/02/2015

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 08/02/2015

Avalanche Problems

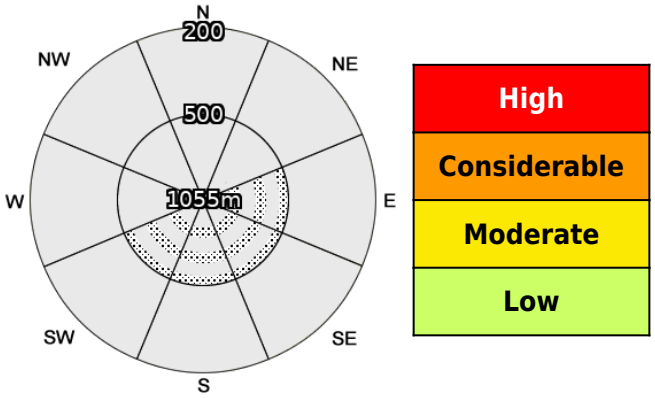


Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to consolidate above 500m and will remain wet below this level. On slopes of East to Southerly aspects, where there is any radiation, there will be the risk of of single point wet snow avalanches. There will also be potential for falling ice from buttresses and cornice collapse. The avalanche hazard will be Moderate



Forecast Weather Influences

Continuing thaw with strengthening Westerly winds accompanied by light scattered snow showers above 650m

Comments

A lot of snow has disappeared from below 200m. Above this travel is difficult due to wet unconsolidated snow. However this improves as height is gained. If you are able to use previous footsteps this makes life a lot easier.
