Issued 08/02/2024

FOR PERIOD 18:00HRS Thu 08/02/2024 TO 18:00HRS Fri 09/02/2024

THE AVALANCHE HAZARD WILL BE LOW

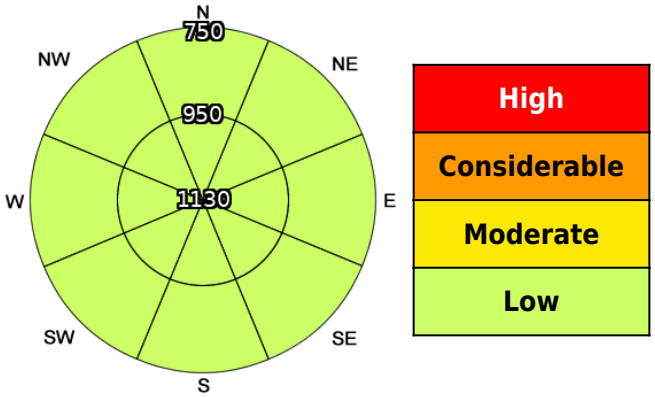
Avalanche Hazard Forecast for Friday 09/02/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Good stability in most locations. Some limited windslab development is possible on selected steep West aspects above 950m. Any new wind drifted snow will be forming on bare ground and present very limited hazard. Existing old snowpack will be hard or crusty snow ice. The avalanche hazard will be Low.



Forecast Weather Influences

A few light snow showers are possible over the period. Strong Easterly airflow. Very cold.

Comments

The old snowpack will be hard or crusty. High summit winds forecast.
