Avalanche Hazard Forecast

Issued 09/02/2024

FOR PERIOD 18:00HRS Fri 09/02/2024 TO 18:00HRS Sat 10/02/2024

THE AVALANCHE HAZARD WILL BE MODERATE

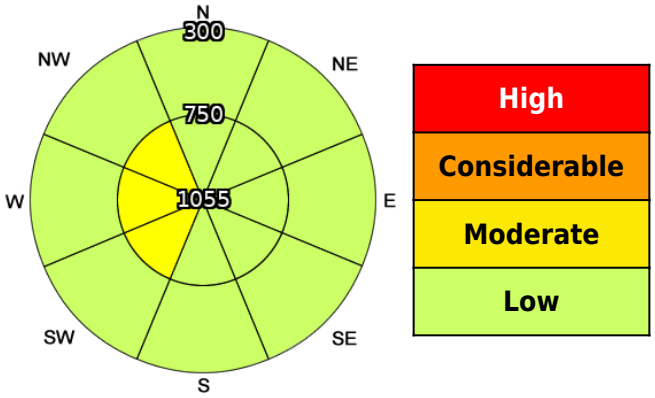
Avalanche Hazard Forecast for Saturday 10/02/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised areas of windslab will accumulate in wind sheltered locations mainly on South-West to North-West aspects above 750 meters and mainly affecting inland mountains. Terrain affected will be gully tops and corrie rims; but amounts will not be extensive and largely avoidable. Remnants of old snow will be hard and icy. The avalanche hazard will be Moderate.



Forecast Weather Influences

Storm force Easterly winds will gradually ease. Snowfall expected across the forecast area with greater amounts on the Eastern hills. The freezing level will gradually rise to around 600 meters.

Comments

The winds are easing as we head into Sunday, but the freezing level is also rising to around 900m. The cosmetic covering of snow at lower elevations is likely to disappear.
