

**THE AVALANCHE HAZARD WILL BE LOW**

**Avalanche Hazard Forecast for Sunday 13/02/2022**

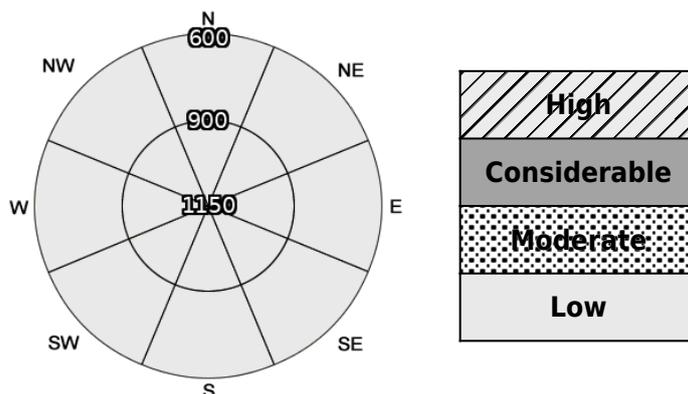

**Avalanche Problems**

Wind Slab

**Forecast Snow Stability & Avalanche Hazard**

The existing snowpack will gradually consolidate, and above 900 metres start to refreeze. Overnight, isolated accumulations of moderately bonded windslab will develop on North to East aspects above 900 metres. These accumulations are expected to be shallow and mainly affect steep wind sheltered areas such as gullies and coire rims. Below 900 metres the snowpack will continue to gradually thaw and diminish. The avalanche hazard will be Low.

**Forecast Weather Influences**

Showers overnight will turn to snow above 800 metres before clearing to give a mainly dry day. The freezing level will lower to around 900 metres during the day. Strong South-Westerly winds overnight will gradually ease, becoming light and variable by morning.

**Comments**

Colder on Monday and Tuesday.
