Torridon

Avalanche Hazard Forecast

Issued 31/12/2015

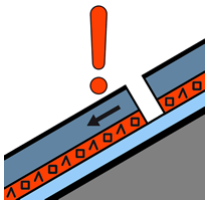
FOR PERIOD 18:00HRS Thu 31/12/2015 TO 18:00HRS Fri 01/01/2016

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 01/01/2016

Avalanche Problems

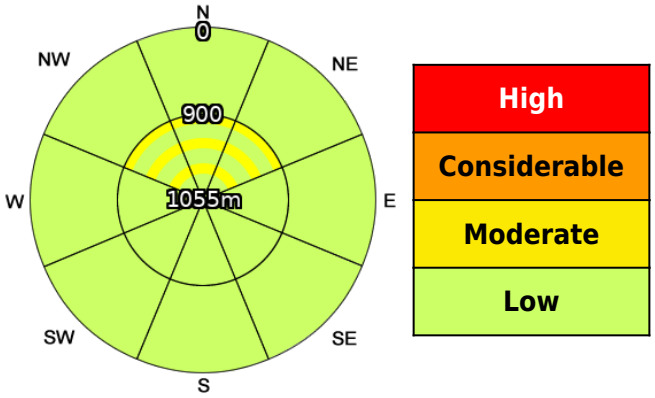
Wind Slab



Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Some new moderately well bonded snow accumulations will develop on mostly North-West to North-Easterly aspects above 900 metres. Steep places such as Coire rims, gully exits and ridge flanks in the highest locations will be most affected and especially where windslab deposits achieve any depth. Elsewhere accumulations will be thin and on bare ground. The avalanche hazard will be Moderate



Forecast Weather Influences

Some snowfall overnight clearing early morning. Winds, strong West South-Westerly overnight backing South then South-Easterly during the day. Freezing level around 400 metres with snow lying to around 200 metres.

Comments

A calm beautiful day to end 2015. Happy New Year to you all and best wishes for 2016 from the Torridon team.
