Avalanche Hazard Forecast

Issued 11/02/2024

FOR PERIOD 18:00HRS Sun 11/02/2024 TO 18:00HRS Mon 12/02/2024

THE AVALANCHE HAZARD WILL BE MODERATE

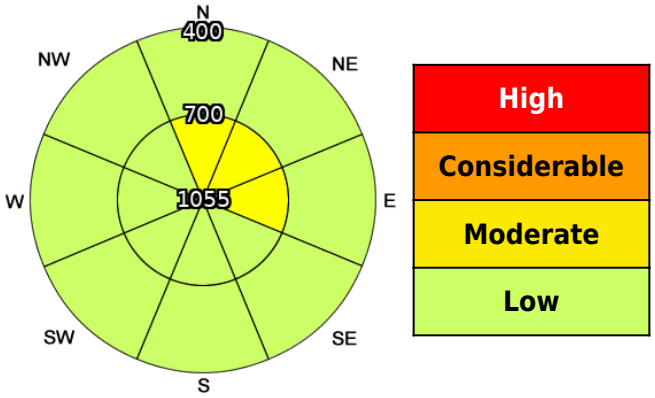
Avalanche Hazard Forecast for Monday 12/02/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Accumulations of fresh unstable windslab will develop gradually on steep North to East aspects, mainly above 700 metres. Accumulations will initially be very shallow only starting to gain depth as the day progresses. Terrain most affected will be wind sheltered areas such as gullies and coire rims. Isolated deposits also possible on North-West aspects. Elsewhere there will be a thin covering of stable snow. The avalanche hazard will be Moderate.



Forecast Weather Influences

Showers throughout the day will be heaviest in the afternoon. Initially snow above around 700 metres turning to snow above 400 metres as the freezing level drops to a similar level. Moderate South-Westerly winds becoming strong South-South-Westerly.

Comments

Snow showers continuing into Tuesday with a milder day to follow on Wednesday.
