

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Monday 14/02/2022****Avalanche Problems****Wind Slab****Cornices****Forecast Snow Stability & Avalanche Hazard**

New accumulations of unstable windslab will develop on East through South to South-West aspects above 900 metres. The greatest instability will be in steep wind sheltered locations, especially below coire rims and gully exits. Fragile cornices will begin to develop in these areas. Other aspects will be affected by cross loading. Elsewhere the snowpack will be firm well bonded and stable. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Snow showers throughout the forecast period. During the night moderate North winds will increase strong to gale force and become generally North-North-Westerly in direction, easing later in the day. The 800 metre freezing level will gradually fall to 600 metres through the afternoon.

Comments

As it turns cooler the old snowpack will firm up with serious runout potential into rocks below.
