THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 14/02/2022

Avalanche Problems

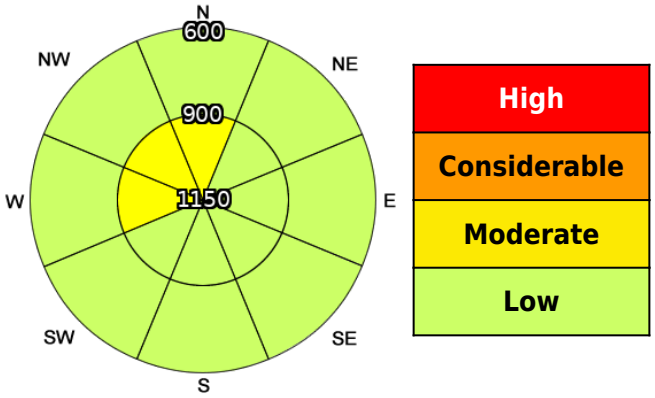

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will firm up in the cooler conditions becoming more stable at all levels; However new snow and wind distribution will build windslab instabilities on East through South to South-West aspects above 800 metres. Steep wind sheltered terrain such as coire rims, ridge flanks, the tops of gullies and scarp slopes will be most affected. Cornices will develop on the same aspects. The avalanche hazard will be Moderate.

Forecast Weather Influences

Winds will remain fresh Northerly at first gaining some strength overnight, easing by the morning becoming light North-North-West by the end of the period. There will be moderate snow showers, heavier tomorrow. The freezing level will gradually lower from 900 metres to 500 metres.

Comments

Remaining colder with the freezing level lowering to 500 metres.
