

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 15/02/2022

Avalanche Problems

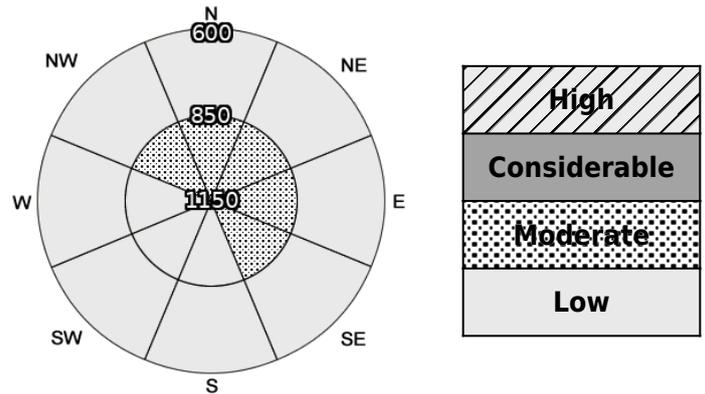

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Cold conditions will firm up the existing snowpack which will become icy particularly in exposed locations. New snow and wind transport of existing deposits will form unstable windslab in sheltered locations mainly above 850 metres. Summit gullies and steep corrie rims with a North-West through North to South-Easterly aspect will be most affected. Fresh cornices will be fragile. The avalanche hazard will be Moderate.

Forecast Weather Influences

Winds will be strong to gale Southerly overnight veering Westerly by day. New snow in the later part of the night will be followed by a mixture of sunny spells and blustery snow showers through the day. The freezing level will be around 300-500 metres.

Comments

Fresh windslab and cornices will require caution.
