Avalanche Hazard Forecast

Issued 21/02/2024

FOR PERIOD 18:00HRS Wed 21/02/2024 TO 18:00HRS Thu 22/02/2024

THE AVALANCHE HAZARD WILL BE LOW

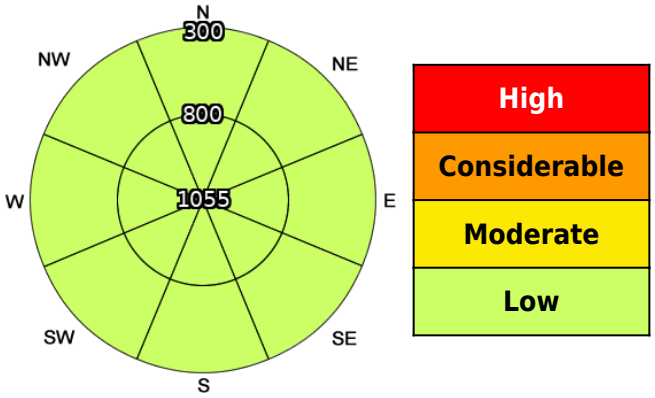
Avalanche Hazard Forecast for Thursday 22/02/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Fresh windslab will be deposited through the period mainly on North-West through North to East aspects above 800 metres. This will mainly lie on bare ground but isolated instabilities will be present mainly where it overlies the existing snowpack in gullies and around corrie rims. The older snowpack will refreeze and remain stable. The avalanche hazard will be Low.



Forecast Weather Influences

Winds will be from a South to South-Westerly direction, very strong initially then easing to become fresh during the day. Showers throughout falling as snow above 500 metres overnight and 300 metres during the day. Freezing level dropping to around 400 metres during the day.

Comments

Cooler conditions should last through the weekend.
