Avalanche Hazard Forecast

Issued 22/02/2024

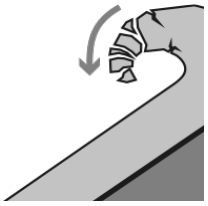
FOR PERIOD 18:00HRS Thu 22/02/2024 TO 18:00HRS Fri 23/02/2024

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 23/02/2024

Avalanche Problems

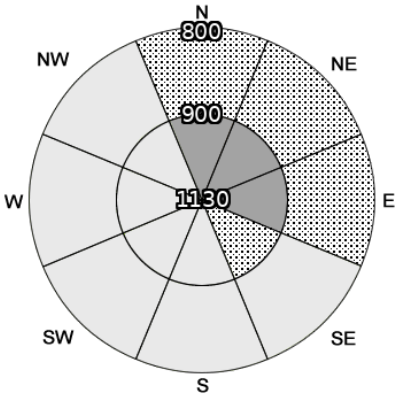
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

Weak windslab will become deeper and more widespread on all steep North to East aspects above 900m. Crossloading also possible onto selected East-South-East aspects. Most affected areas will be coire rims and steep gullies. New weak, collapse prone cornices will overhang many of these locations. Much better stability on windward aspects and all ridge lines. The avalanche hazard will be Considerable



Forecast Weather Influences

Wintry conditions continuing overnight and throughout the day. Cold with snow showers on moderate to strong generally South-West winds.

Comments

Remaining wintry. Unstable windslab expected to more widespread on Friday.
