Avalanche Hazard Forecast

Issued 23/02/2024

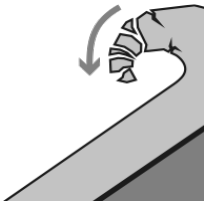
FOR PERIOD 18:00HRS Fri 23/02/2024 TO 18:00HRS Sat 24/02/2024

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 24/02/2024

Avalanche Problems

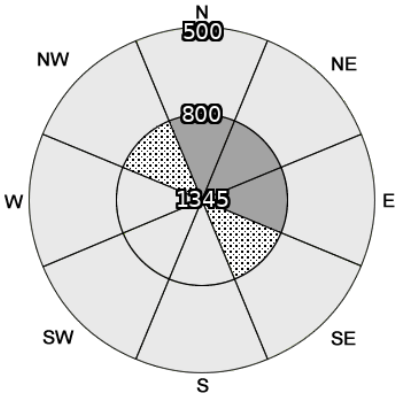
Wind Slab

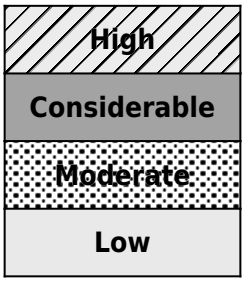


Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will remain on mainly steep North to East aspects above 800 metres. Instabilities will persist within this windslab. Scarp slopes, gullies and coire rims will be most affected. Fragile cornices will be present above these aspects. South to West aspects will tend to be scoured and stable. The avalanche hazard will be Considerable.





Forecast Weather Influences

After a few overnight showers it will be a generally dry day. The freezing level will be around 600 metres. Winds will be light and veer from South to West through the day.

Comments

A fair amount of new snow has been deposited above 800 metres, with some localised drifts below this altitude as well. A dry day is forecast tomorrow, with light winds.
