Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sun 25/02/2024 TO 18:00HRS Mon 26/02/2024

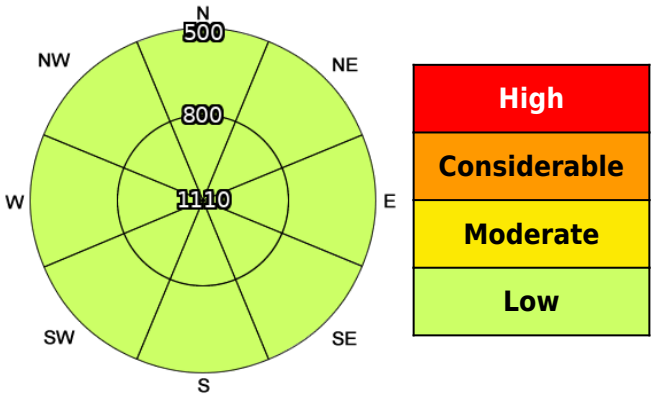
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 26/02/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Inconsequential amounts of fresh snow will fall overnight, settling above 500 metres elevation, largely on bare Southerly aspects. Otherwise, the snowpack will be shallow and stable throughout with deeper isolated pockets of windslab remaining in steep locations on North to East aspects, mainly above 800 metres. Exposed areas of old snow will be very firm. The avalanche hazard will be Low.



Forecast Weather Influences

After a little overnight snow, it will be a largely dry and cloudy day. The Northerly breeze will freshen during the period of snowfall, easing thereafter, becoming a light Westerly by midday before freshening and backing Southerly later. The freezing level will dip to 500 metres overnight, rising to around 650 metres through the day.

Comments

A transient ridge of high pressure on Monday, becoming unsettled again thereafter with summit snow at times.
