Avalanche Hazard Forecast

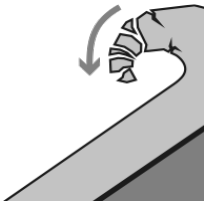
FOR PERIOD 18:00HRS Mon 26/02/2024 TO 18:00HRS Tue 27/02/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 27/02/2024

Avalanche Problems

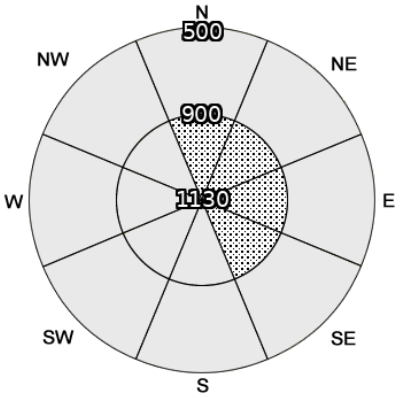
Wind Slab

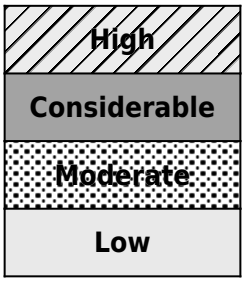


Cornices

Forecast Snow Stability & Avalanche Hazard

Fresh unstable windslab will add to existing accumulations mainly on North through East to South-East aspects above 900 metres. Cornices, mainly above these aspects, will be prone to collapse. Generally good stability on other aspects and at lower elevations. The avalanche hazard will be Moderate.





Forecast Weather Influences

South-South-West winds increase to gale force overnight and then ease slightly and veer to Westerly during the day. Showers starting during the night will generally fall as snow above around 650 metres, but for a time around dawn will only fall as snow on the higher summits. The freezing level will rise to around 1000 metres around dawn before dropping back to around 750 metres.

Comments

Unsettled conditions forecast for the rest of the week.
