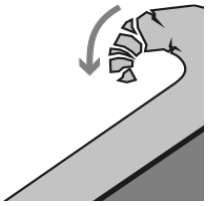
THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 29/02/2024

Avalanche Problems

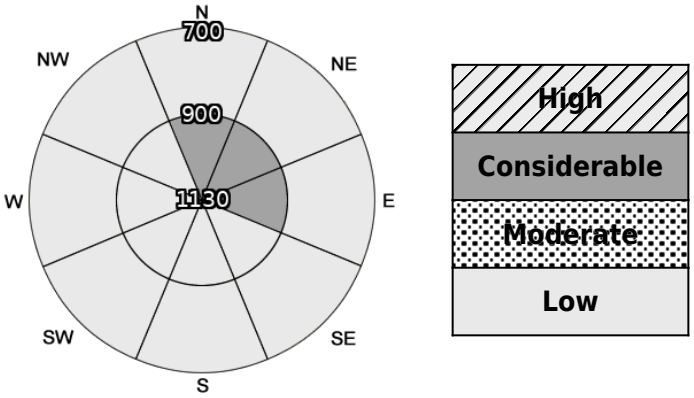
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

Overnight the old moist snowpack will refreeze and become well stabilized in all locations. New accumulations of weakly bonded windslab will begin to accumulate on all steep North to East aspects above 900 metres during the morning. Stability will decline progressively in these locations over the course of the day, becoming poor later. New weak cornice development anticipated over steeper lee slopes. The avalanche hazard will be Considerable.



Forecast Weather Influences

Remaining mild until midnight then progressively much colder. Overnight rain showers turning to snow showers, which will continue for the rest of the period. Strong South West winds.

Comments

Period of poorest stability expected to be later in the day.
