Avalanche Hazard Forecast

Issued 01/03/2024

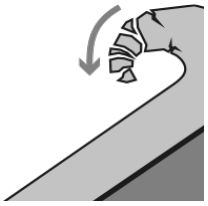
FOR PERIOD 18:00HRS Fri 01/03/2024 TO 18:00HRS Sat 02/03/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 02/03/2024

Avalanche Problems

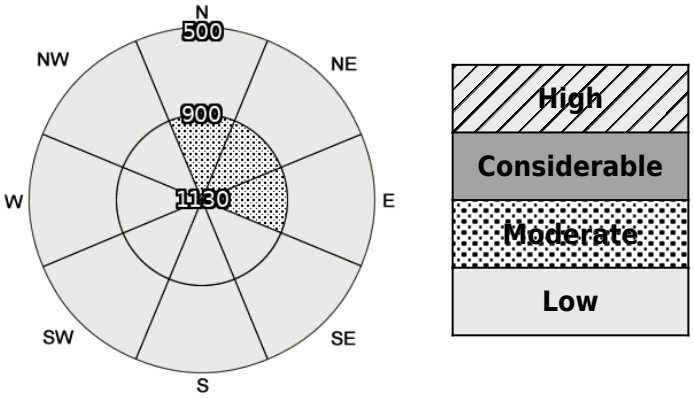
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

Localised accumulations of wind slab will be present above 900m mainly on Northerly to Easterly aspects, with coire rims, gully tops and scarp slopes most affected. Fresh cornices, overhang these aspects and are new and fragile. Some insignificant limited redistribution onto W aspects may occur. Below this level, there will be a thin cover mostly lying on bare ground. The old snowpack that lies predominantly on N to E aspects will be firm and stable. The avalanche hazard will be Moderate



Forecast Weather Influences

A mostly dry day is expected with the occasional snow shower in the early hours, and around midday. Winds will be fresh to light North- East to Easterly. Another cold day with a freezing level generally around 600m.

Comments

A beautiful clear winters day.
