Avalanche Hazard Forecast

Issued 01/03/2024

FOR PERIOD 18:00HRS Fri 01/03/2024 TO 18:00HRS Sat 02/03/2024

THE AVALANCHE HAZARD WILL BE LOW

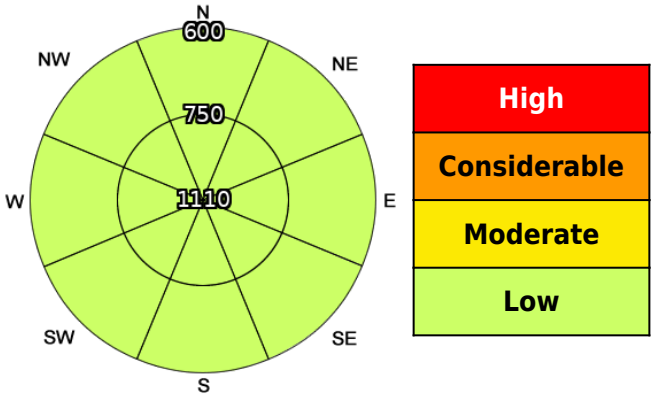
Avalanche Hazard Forecast for Saturday 02/03/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Little change expected. The snowpack will remain stable in most locations. Minor weaknesses will persist in isolated and generally avoidable areas of windslab, mainly on steep North to East aspects above 750 metres, particularly where it overlies old snow. Exposed areas of old snow will be very firm. Elsewhere, the snow cover will remain shallow and new snow amounts will be minimal. The avalanche hazard will be Low.



Forecast Weather Influences

Patchy light snowfall is forecast overnight and early morning, becoming largely dry through the day. The fresh, generally Northerly wind will gradually moderate and veer North-East through the day. The freezing level will dip to 350 metres overnight, peaking at 650 metres in the afternoon.

Comments

The significant snowfall during Saturday that was mentioned in yesterday's comments is unlikely to materialise in the NW highlands. But a decent weather forecast for the weekend nonetheless.
