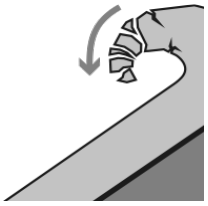
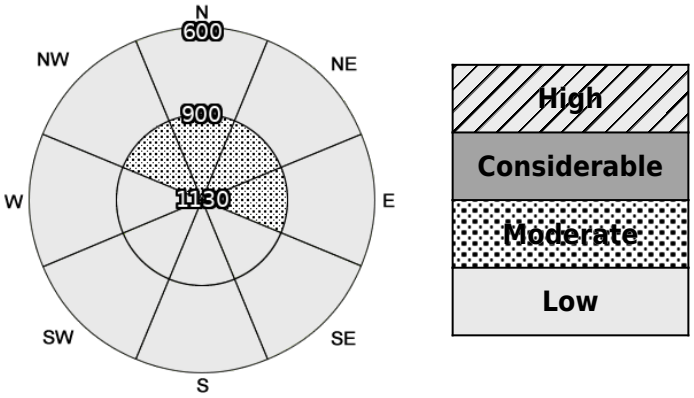
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

Weak windslab will become more widespread on steep North-West through North to North-East aspects above 900m. Cross loading will also affect the top of some East facing gullies. Sharp edged coire rims and gully exits will be the areas of main concern, many of which will be overhung by weak cornices. Much better stability at lower altitudes and on recently wind scoured aspects. The avalanche hazard will be Moderate



Forecast Weather Influences

No precipitation is forecast. Remaining cold. Moderate South Easterly winds easing overnight but increasing from dawn onwards.

Comments

Weak windslab in place during the morning but some partial consolidation possible later in the day.
