Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 04/03/2024 TO 18:00HRS Tue 05/03/2024

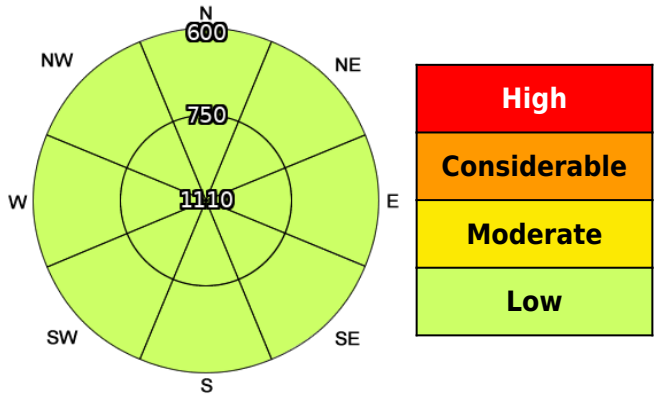
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 05/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change is expected. The remaining old, firm snow will be confined to steep North through East to South-East aspects above 800 meters. The snowpack will continue to consolidate and is expected to be generally stable. The avalanche hazard will be Low.



Forecast Weather Influences

Gale force East-South-East winds possibly gusting overnight to Storm force; easing to strong during the day. A light shower falling as snow at summit levels late afternoon in the West of the region. The freezing level will fluctuate around summit level or just below.

Comments

The South-Easterly airstream continues, bringing dry and clear conditions to the North-West of Scotland. Freezing level rising to summit level during the day, indicating a slow depletion in the snow pack.
