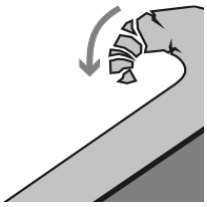
Avalanche Hazard Forecast for Wednesday 06/03/2024

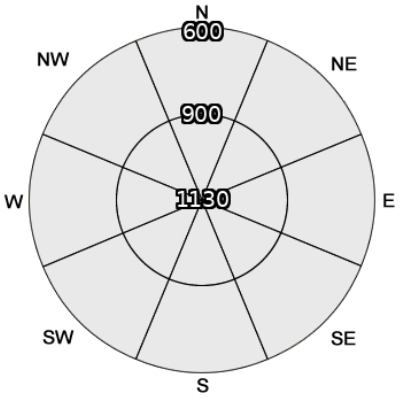
Avalanche Problems



Cornices

Forecast Snow Stability & Avalanche Hazard

A little thin humid windslab is possible on steep North-West through North to North-East aspects above 1000m. Any new accumulations will be small and easy to avoid. The older snowpack will continue to consolidate in all locations. Cornices over recent lee slopes will remain weak and prone to sudden collapse. The avalanche hazard will be Low.



Forecast Weather Influences

Some very light snowfall is possible over summits. Light South-East winds becoming fresh later. Freezing at 1100m overnight and 900m during the day.

Comments

Care required in vicinity of collapse prone cornices.
