Avalanche Hazard Forecast

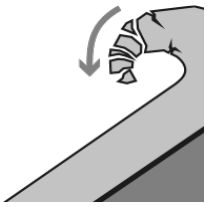
Issued 07/03/2024

FOR PERIOD 18:00HRS Thu 07/03/2024 TO 18:00HRS Fri 08/03/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 08/03/2024

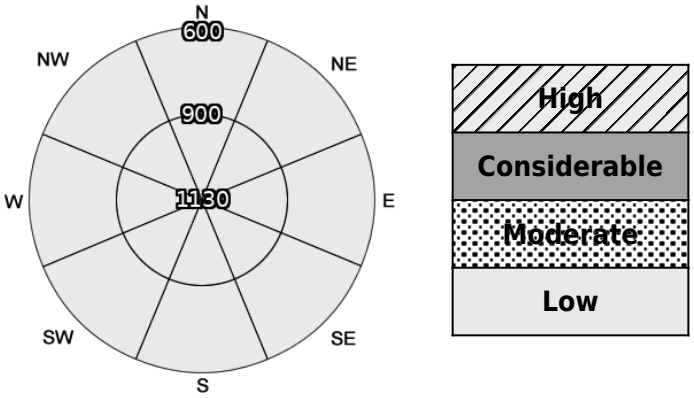
Avalanche Problems



Cornices

Forecast Snow Stability & Avalanche Hazard

Little change is expected. The snowpack will be firm and stable at all altitudes, and on all aspects. The greatest snow cover lies above 900 metres on North-West through North to Easterly aspects. Particularly in high coires and deeply defined gully lines. Large cornices remain. The avalanche hazard will be Low.



Forecast Weather Influences

A mostly dry day is expected with the potential for very light trace snow above 500 metres early in the morning. Winds will be very strong and predominately from the East-South-East. Due to a temperature inversion, ground and snow temperatures are expected to be below freezing above 600 metres for the duration of the day.

Comments

The snowpack will firm up. Correspondingly, the consequences of a slide or fall will be significant.
