Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sat 09/03/2024 TO 18:00HRS Sun 10/03/2024

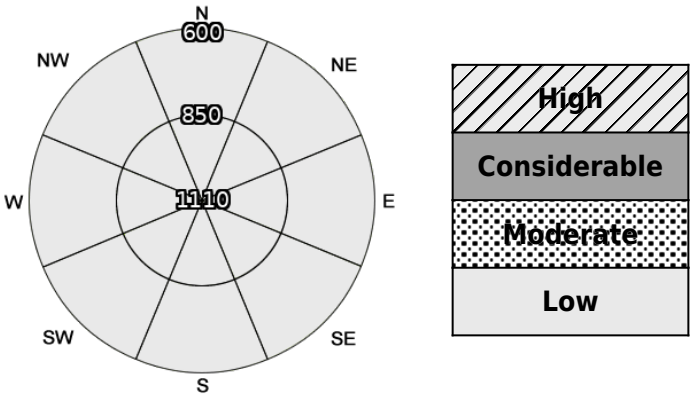
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 10/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change is expected to the snowpack which will be firm and stable throughout. Greatest snow cover will be in the mountain areas inland from the coastal ranges, with most accumulations on Northerly to Easterly aspects above 700 metres, particularly in gullies, coire back walls and below coire rims. The avalanche hazard will be Low



Forecast Weather Influences

Winds will be very strong to occasional gale force East to South-Easterly. A dry forecast period is expected but some showers may develop with a trace of snow at high elevations possible. Remaining cold, summit temperatures around -3 deg C overnight warming slightly in the day.

Comments

Most snow in inland ranges and quite extensive in N-NE facing slopes - very hard and icy with serious consequences for any slips or falls.
