Glencoe

Avalanche Hazard Forecast

Issued 14/12/2021

FOR PERIOD 18:00HRS Tue 14/12/2021 TO 18:00HRS Wed 15/12/2021

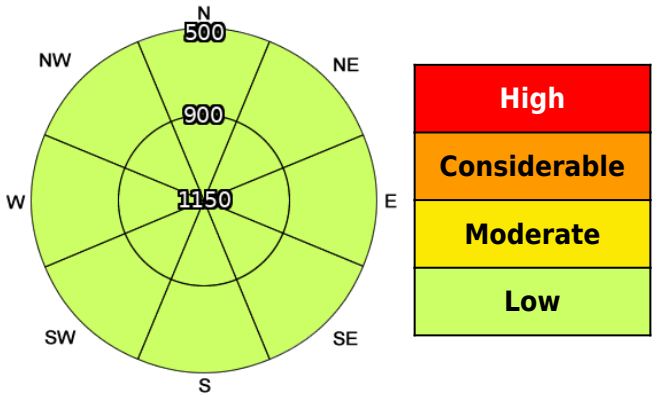
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 15/12/2021

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will initially be soft and moist with generally good stability on all but the very steepest slopes and gully exits where surface wet snow instabilities will exist. A return to drier and cooler conditions through the day will aid the consolidation process in all areas. The avalanche hazard will be Low.



Forecast Weather Influences

Mild and wet conditions will continue overnight affecting all levels. It will become drier and cooler through the morning with the freezing level lowering to around 1200 metres by the end of the day. Strong to gale force winds overnight will moderate through the course of the day and will be mainly from a West-South-Westerly direction.

Comments

Mild and quite wet conditions are expected overnight with a return to dry and cooler conditions on Wednesday.
