Southern Cairngorms

Issued 12/03/2024

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Tue 12/03/2024 TO 18:00HRS Wed 13/03/2024

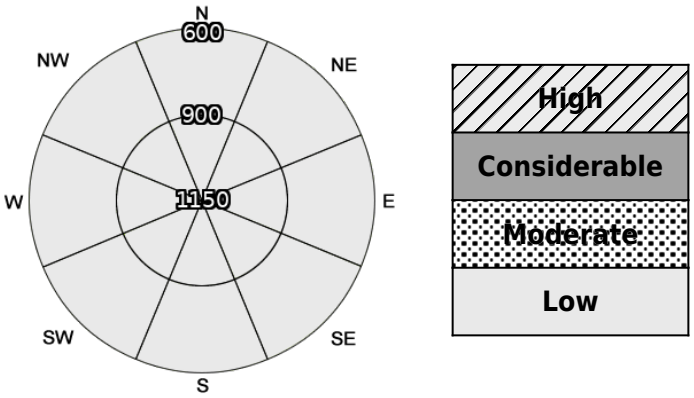
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 13/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Risk of cornice collapse overnight due to rain and thaw conditions. Limited risk of minor surface instability on steeper terrain, mainly on West to North aspects above 900 metres. During the morning the snow will slowly start to firm up above 950 to 1000 metres but will remain soft and wet below 900 metres. Stability will be generally good throughout. The avalanche hazard will be Low.



Forecast Weather Influences

Overnight rain, followed by a dry day. Fresh Southerly winds overnight, increasing to become gale force West-South-Westerly by early afternoon. Freezing level above the summits overnight, lowering to 900 metres during the morning, 950 metres in the afternoon.

Comments

Remaining very unsettled with precipitation, strong winds and a fluctuating freezing level.
