Avalanche Hazard Forecast

Issued 14/03/2024

FOR PERIOD 18:00HRS Thu 14/03/2024 TO 18:00HRS Fri 15/03/2024

THE AVALANCHE HAZARD WILL BE LOW

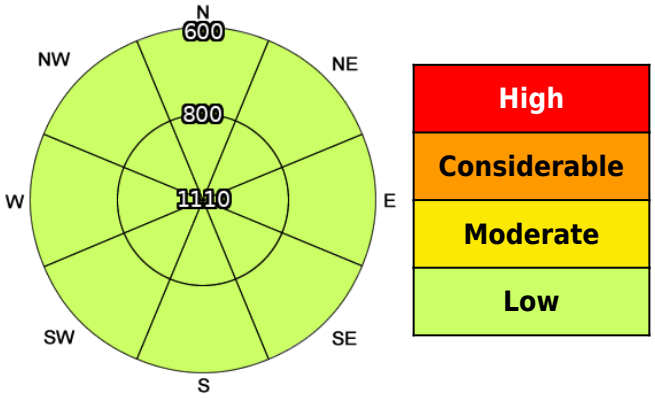
Avalanche Hazard Forecast for Friday 15/03/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Isolated areas of moderately bonded windslab expected on South and South-West aspects above 700 metres. Accumulations are not expected to be extensive and will be confined to steep wind sheltered locations such as gully tops and coire rims. The existing snowpack will be well consolidated and stable in all locations, becoming firm and icy. The avalanche hazard will be Low.



Forecast Weather Influences

Precipitation, falling as snow above 700 metres, is expected overnight and during the day. Moderate winds from the North-East will back and become Northerly. The freezing level will lower to 700 metres by dawn.

Comments

A coating of new snow is expected above 700 metres on all aspects. Fresh snow fall amounts are not expected to be significant and will be mainly overlying bare ground.
