Glencoe

Avalanche Hazard Forecast

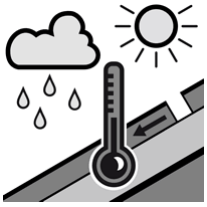
Issued 29/12/2021

FOR PERIOD 18:00HRS Wed 29/12/2021 TO 18:00HRS Thu 30/12/2021

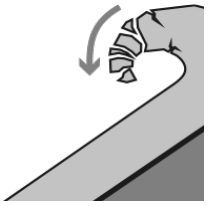
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 30/12/2021

Avalanche Problems



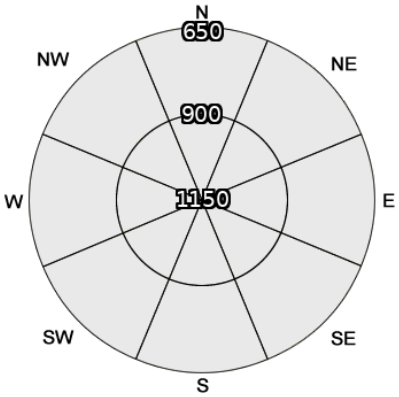
Wet Snow

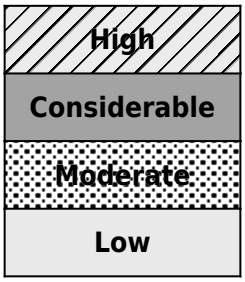


Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will consolidate further, remaining soft and wet but generally stable. Some localised surface wet snow instabilities may still exist on steeper slopes. Most affected areas will be above 900 metres in steep wind sheltered places, such as coire rims, gully tops and scarp slopes mainly with a North-West through North to East aspects. Any remaining cornices will be soft and prone to collapse. The avalanche hazard will be Low





Forecast Weather Influences

The freezing level will be above the highest summits for all of this period. Rain at all levels, heaviest in the early part of the morning, becoming drier in the afternoon, winds will be strong from a South-Westerly direction.

Comments

Drier tomorrow afternoon with easing South-Westerly winds, mild conditions.
