Southern Cairngorms

Avalanche Hazard Forecast

Issued 15/03/2024

FOR PERIOD 18:00HRS Fri 15/03/2024 TO 18:00HRS Sat 16/03/2024

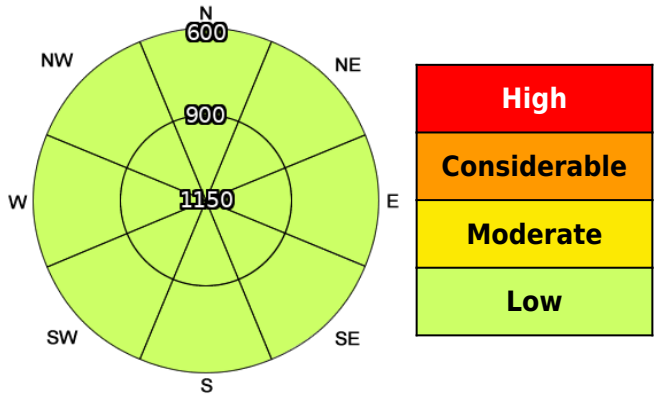
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 16/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The majority of the snowpack will be firm and generally well bonded. Greatest amounts will be found around coire rims and gully tops, mostly on West through North to East aspects above 900 metres. The avalanche hazard will be Low.



Forecast Weather Influences

A bright and dry day is expected. Overnight freezing level will be down to 500 metres, lifting to around 800 metres during the day. Winds will be very light around dawn but will become strong from the South-South-East later.

Comments

A fresh covering on most aspects today. Not particularly deep, expected to refreeze becoming icy underfoot. Our Northern boundary holding more snow at higher elevations, worth checking with SAIS Northern Cairngorms if planning to head into main hills.
