Northern Cairngorms

Avalanche Hazard Forecast

Issued 22/01/2022

FOR PERIOD 18:00HRS Sat 22/01/2022 TO 18:00HRS Sun 23/01/2022

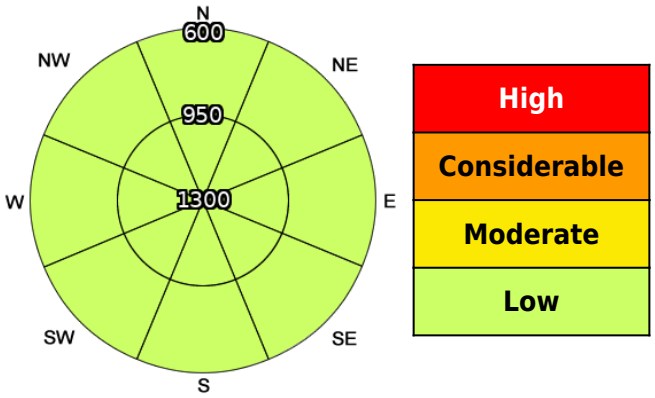
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 23/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The limited snowpack will be well bonded and stable at all altitudes. Greatest amounts will be found on North-West through North to Easterly aspects above 950 metres, especially around coire back walls, ridge flanks and on the plateau. The avalanche hazard will be Low.



Forecast Weather Influences

It is expected to be dry throughout the forecast period with strong to gale force South-Westerly winds. The freezing level will be above the summits overnight before it turns cooler during the day.

Comments

Although mild, the snowpack is firm at higher levels with serious run-out potential into rocks below.
