Avalanche Hazard Forecast

Issued 17/03/2024

FOR PERIOD 18:00HRS Sun 17/03/2024 TO 18:00HRS Mon 18/03/2024

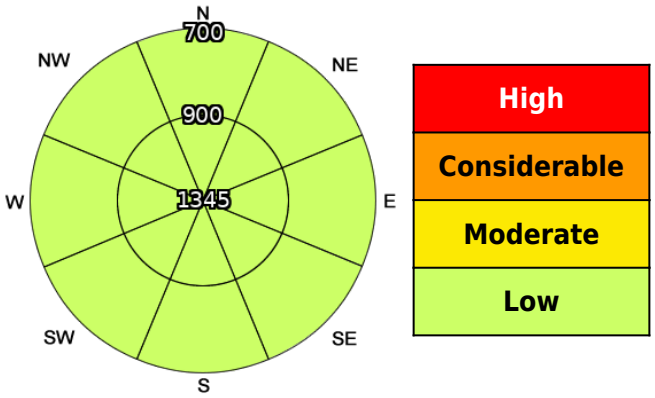
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 18/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to consolidate. Generally stability will be good. As the day progresses the snow surface will become firm and icy on the higher summits. The greatest snow cover will be found on North to East aspects above 900 meters. Below this elevation there will be softer isolated areas, mainly in stream beds and hollows. The avalanche hazard will be Low.



Forecast Weather Influences

Fresh Southerly winds overnight will gradually increase to gale force by the end of the forecast period. Light rain during the evening and trace amounts of snow in the early hours of the morning will subside to leave a mainly dry day. The freezing level will fluctuate around the summits.

Comments

Warm front and associated increase in winds expected into Monday evening.
