Torridon

Avalanche Hazard Forecast

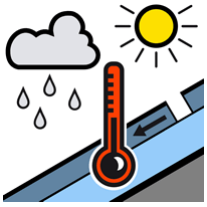

Issued 25/02/2022

FOR PERIOD 18:00HRS Fri 25/02/2022 TO 18:00HRS Sat 26/02/2022

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 26/02/2022

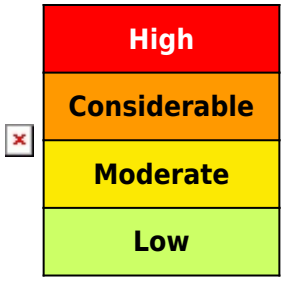

Avalanche Problems

Wet Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will generally have good stability throughout, with surface softening occurring, particularly at lower elevations. Existing isolated areas of moderately bonded windslab will have a brief period of wet snow instability before becoming more consolidated through the day. Affected locations will be steep North-East through East to South aspects mainly above 700 metres. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight, a band of light rain with summit sleet at times will ease by daybreak to give a generally dry and overcast day. There will be a persistent South-South-West gale force wind throughout the forecast period. The freezing level will generally be above, or at the highest summit level.

Comments

Continued slow consolidation of the snowpack.
