Avalanche Hazard Forecast

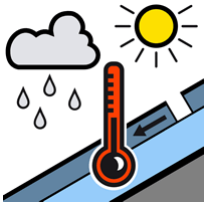
Issued 17/03/2024

FOR PERIOD 18:00HRS Sun 17/03/2024 TO 18:00HRS Mon 18/03/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 18/03/2024

Avalanche Problems

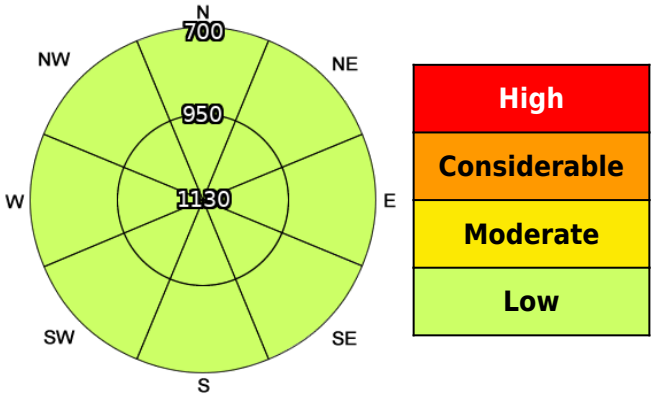


Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain moist and stable in most locations. Some lingering wet snow instabilities will remain in very steep locations such as scarp slopes and gully tops close to plateau and coire rims. The greatest snow cover is on North-West through North to East aspects above 850 metres. In other locations the snowpack will become increasingly patchy and depleted in the slow thaw. Residual cornices will present a limited threat of collapse. The avalanche hazard will be Low.



Forecast Weather Influences

Light showers are anticipated overnight, these will fall as rain at all elevations with the potential for some sleet at summit level. Winds will be mostly strong Southerlies, veering to the South-South-West and building to gale force by the end of the forecast period. The freezing level will remain above or just at summit level.

Comments

The snowpack will continue to become depleted as the slow thaw continues. Colder conditions set to resume midweek.
